

KYDOS WATER ENERGIZER

KYDOS is made of a natural high quality rare earth magnet encased in the highest grade, organically safe, durable and fully waterproof PET plastic shell. Run water directly over KYDOS to give water a natural and instant energetic charge that lasts up to 4 hours. Subsequently leave KYDOS in with the energized water (one KYDOS for each 40L of water). KYDOS will hold and strengthen the charge. You might find that KYDOS water performs as a natural detergent and dirt-lifting agent. Test for yourself whether KYDOS water may allow you to reduce your usage of household cleaning detergents by 50% to 100% (this is based upon what some users have reported.) You may also wish to test whether KYDOS may help you in creating a safer, antiallergenic, chemical-free home, improving health, protecting the environment, saving time and money. Each KYDOS is hand-assembled and quality-inspected such that KYDOS and its energization potential are guaranteed for life. KYDOS is small (4 cm in diameter), lightweight & temperature resistant to boiling point.

KYDOS is perhaps able, on a molecular level, to stabilize, soften and re-energize various forms of water such as natural tap, filtered, spring-bottled or chemically softened. It is believed that KYDOS may make water more solvent by reinforcing water's polar properties; we are currently funding some laboratory tests to see if we can prove that belief using the rigorous standards of modern Western science. KYDOS energized water is healthy and safe to use in all instances where water is normally employed and its use has no known contraindications. KYDOS, itself, should, however, be kept away from electronics, magnetic devices and pace-makers.

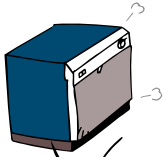

For a healthy and sparkling house, try using KYDOS energized water for yourself in the washing machine, in cleaning washable surfaces, in the dishwasher, in cleaning jewelry and silverware, in ironing clothes, in the kitchen to wash foods (meat, poultry, fish, fruits and vegetables), in watering flowers and plants, in caring for pets, in personal hygiene for showering and bathing, in cooking and in drinking water.

WASHING CLOTHES AND WASHING MACHINES: Place KYDOS in washing machine together with clothes to be washed. Use normal wash cycle and experiment with reducing regular detergent dosage by 50%; you may be pleasantly surprised. You might also try using Kydos in lieu of using other cleaning agents such as calcium lime removers or fabric softeners, and again, you may be pleasantly surprised at the results. When washing by hand, immerse clothes to be washed in KYDOS energized water and proceed with normal washing and try using only 50% of the regular amount of detergent, and see what happens. When washing stained clothing, soak clothes in warm KYDOS energized water for a few minutes to a few hours prior to placing them in the washing machine.

WASHABLE SURFACES & APPLIANCES: Use to clean glassware, crystal ware, floors, shades, blinds, windows, furniture, stainless steel, kitchen surfaces, ovens, picture frames, doors, chandeliers, sanitary items, leather chairs/sofas, glasses, TV/computer screens, cars, bicycles etc. Wash surfaces using KYDOS energized water and a clean cloth, then wipe dry. For car interiors, use KYDOS energized water with a clean chamois cloth. Try using KYDOS water to remove calcium lime or other mineral deposits.

DISHWASHERS: Place KYDOS in cutlery basket. Try reducing regular amount of detergent used by 50%, and check on your results. Proceed with regular washing. You may omit rinse cycle.

JEWELLERY AND SILVERWARE: Immerse items to be cleaned in KYDOS energized water, allow them to sit for a few minutes to a few hours and then remove and dry with a soft cloth.

IRONING: Fill the iron with KYDOS energized water. You may wish to see if the use of KYDOS water reduces calcium buildup and allows you to stop using calcium lime removal agents.

FRUITS & VEGETABLES: Use KYDOS energized water to wash fruits and vegetables.

MEAT, POULTRY, FISH: Immerse meat or poultry in a bowl with KYDOS energized water for 5 - 10 minutes, pat dry with paper towel and proceed to cook. Clean meat or poultry of sediment and tenderize it. Fish carries organic sediments that cause its characteristic musty smell. Immerse fish in a bowl with KYDOS energized water and completely clean it of foreign particles. Test whether the fish odour is eliminated from the fish and your hands and plates by soaking the fish in Kydos water before cooking it.

FLOWERS, PLANTS AND PETS: Use KYDOS energized water for regular chemical-free care of flowers, plants and pets (bathing, grooming and drinking water).

BATHING, SHOWERING AND PERSONAL HYGIENE: Use KYDOS energized water for body and hair hygiene. Try using Kydos and reducing your usage of chemical body detergents by 50%; you may be pleasantly surprised. In bathing, place KYDOS under running bath water spout while preparing bath water and then leave KYDOS in tub while bathing. Check smoothness and freshness of skin. Please consult info on KydosLive for additional information on bathing or showering.

BRUSHING TEETH: Pour KYDOS energized water into a glass and immerse toothbrush. Proceed with brushing teeth and then rinse with KYDOS energized water. Check levels of plaque and tartar. For hygiene of dentures & dental appliances, place appliance in KYDOS energized water for a few hours and then rinse again with KYDOS energized water.

DRINKING & COOKING WATER: Place KYDOS in water jug and pour water over KYDOS into jug to energize drinking water. Leave KYDOS in the water jug to hold and to strengthen the energization. Also try using KYDOS water in food preparation and cooking. For more info on drinking and cooking with KYDOS water, please consult info on KydosLive water faucet attachment.
